

Health Signage & Information

A collection of COVID-19 posters and wellness graphics

CONTENTS

ARC and Riot are working hard to support our customers during these unprecedented times. To do our part, we're offering some essentials to combat the spread of COVID-19 and help you to maintain a healthy environment for you and your team.

This collection features a variety of posters, signs, floor graphics, and tools that can be used to provide critical information for your organization, employees, and visitors.

Health & Wellness Signs	3
Social Distancing Signs	8
Floor Decals	12
Working From Home Essentials	16
Storefront Signs	17

Branded versions which include company logo and custom messaging are available upon request. Our team is happy to discuss any additional materials you need to help support you.

HEALTH & WELLNESS SIGNS

Our posters and signs are available in multiple languages and laminated with premium materials for easy cleaning and sanitizing.

Ideal for:

- Jobsites
- Offices
- Lobbies
- Schools
- Banks
- Kitchens
- Restrooms
- Hospitals
- Common Areas
- Pharmacies

Sizes:

- 11" x 17"
- 18" x 24"
- 24" x 36"
- 30" x 40"

HEALTH & WELLNESS SIGNS

PROTECT YOUR HEALTH!
Prevent and avoid the spread of infectious disease with these best practice health tips.

Symptoms of infectious disease can include:

Runny Nose, Sore Throat, Fever, Shortness of Breath, Headache

And can be spread by:

Personal Contact, Infected Surfaces, Airborne Transmission

Prevent and avoid the spread:

Wash hands with soap or sanitizer frequently and thoroughly. Avoid touching your eyes, nose or mouth with unwashed hands. Cover coughs or sneezes with your elbow or tissue if available. Dispose of dirty or used tissues or paper towels.

Stay Informed!

Avoid close contact with people who, even if appear to be well. Disinfect shared or frequently touched surfaces and objects. New info on how to protect yourself and stay healthy is updated by the Center for Disease Control and Prevention regularly. For the most current updates, visit cdc.gov

COVID-19 CDC Protects and Prepares Communities

CDC is aggressively responding to the global outbreak of COVID-19 and preparing for the potential of community spread in the U.S.

Travel

- Conducts outreach to travelers
- Issues travel notices

Laboratories and diagnostics

- Develops diagnostic tests
- Confirms all positive test results submitted by states

Schools

- Provides guidance for school reopening and school closures and school education

Businesses

- Provides business guidance including recommendations for sick leave policies and continuity of operations

Community members

- Shares information on symptoms and prevention
- Provides information on home care
- Encourages social distancing

Healthcare professionals

- Develops guidance for healthcare professionals
- Conducts clinical outreach and education

Healthcare systems

- Develops preparedness readiness for health systems
- Provides guidance for PPE supply management, healthcare system opening and infection control
- Leverages existing healthwith tools to redirect persons to the right level of care

COVID-19 Share Facts About COVID-19

Know the facts about coronavirus disease 2019 (COVID-19) and help stop the spread of rumors.

FACT 1 Diseases can make anyone sick regardless of their race or ethnicity.

People of Asian descent, including Chinese Americans, are not more likely to get COVID-19 than any other American. Help stop fear by letting people know that being of Asian descent does not increase the chance of getting or spreading COVID-19.

FACT 2 Some people are at increased risk of getting COVID-19.

People who have been in close contact with a person known to have COVID-19 or people who live in or have recently been in an area with ongoing spread are at an increased risk of exposure.

FACT 3 Someone who has completed quarantine or has been released from isolation does not pose a risk of infection to other people.

For up-to-date information, visit CDC's coronavirus disease 2019 web page.

FACT 4 You can help stop COVID-19 by knowing the signs and symptoms:

- Fever
- Cough
- Shortness of breath
- Seek medical advice if you
- Develop symptoms

AND

- Have been in close contact with a person known to have COVID-19 or if you live in or have recently been in an area with ongoing spread of COVID-19.

FACT 5 There are simple things you can do to help keep yourself and others healthy.

- Wash your hands often with soap and water for at least 20 seconds, especially after blowing your nose, coughing, or sneezing; going to the bathroom; and before eating or preparing food.
- Avoid touching your eyes, nose, and mouth with unashed hands.
- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.

COVID-19 STOP THE SPREAD OF GERMS

Help prevent the spread of respiratory diseases like COVID-19.

Avoid close contact with people who are sick, clean those the tissues.

Cover your cough or sneeze with a tissue, then throw the tissue in the trash.

Clean and disinfect frequently touched objects and surfaces.

Avoid touching your eyes, nose, and mouth.

Stay home when you are sick, except to get medical care.

Wash your hands often with soap and water for at least 20 seconds.

COVID-19 SYMPTOMS OF CORONAVIRUS DISEASE 2019

Patients with COVID-19 have experienced mild to severe respiratory illness.

Symptoms* can include

- FEVER**
- COUGH**
- SHORTNESS OF BREATH**

*Symptoms may appear 2-14 days after exposure.

Seek medical advice if you develop symptoms, and have been in close contact with a person known to have COVID-19 or if you live in or have recently been in an area with ongoing spread of COVID-19.

COVID-19 What to do if you are sick with coronavirus disease 2019 (COVID-19)

If you are sick with COVID-19 or suspect you are infected with the virus that causes COVID-19, follow the steps below to help prevent the disease from spreading to people in your home and community.

Stay home except to get medical care

You should avoid a routine errand to your home, except to get medical care. Do not go to work, school, or public areas. Avoid public transportation, ride sharing, or taxis.

Separate yourself from other people and animals in your home

As much as possible, you should stay in a specific room and avoid other people in your home. Also, you should use a separate bathroom, if more information.

Animals: Do not handle pets or other animals while sick. See <https://www.cdc.gov/COVID19/animals/> for more information.

Call ahead before visiting your doctor

If you have a medical appointment, call the healthcare provider and tell them that you have or may have COVID-19. This will help the healthcare provider offer safe ways to keep other people from getting infection or exposure.

Wear a facemask

This should avoid a facemask when you are around other people (e.g., shopping or errands) or when you are around other people in a healthcare provider's office. If you are not able to wear a facemask (for example, because it causes trouble breathing), then people who live with you should wear a facemask if they are around you, or they should wear a facemask if they enter your room.

Cover your cough and sneezes

Cover your mouth and nose with an elbow when you cough or sneeze. Throw used tissues in a closed trash can immediately. Wash your hands with soap and water for at least 20 seconds or clean your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol content. If neither of your hands and elbows then together used they find dry. Soap and water should be used preferentially if hands are visible dirty.

Avoid sharing personal household items

You should not share dishes, drinking glasses, cups, eating utensils, towels, or bedding with other people or pets in your home. After using these items, they should be washed thoroughly with soap and water.

Discourage home visitors

People with confirmed COVID-19 should restrict home visitors and the risk of secondary transmission to others is thought to be low. The decision to discourage home visitors should be made into a case-by-case basis in consultation with healthcare providers and state and local health departments.

Clean your hands often

Wash your hands often with soap and water for at least 20 seconds. If soap and water are not available, then your hands with an alcohol-based hand sanitizer that contains at least 60% alcohol content. If you have been coughing, sneezing, or blowing your nose, your hands and mouth should be washed together with soap and water. Avoid touching your eyes, nose, and mouth with unashed hands.

High touch surfaces include: counters, tables, desks, doorknobs, bathroom fixtures, tables, phones, keyboards, tables, and handles. Also, they are not clean if they have been touched, cleaned, or wiped. Use a household or commercial disinfectant on high touch surfaces. Use a household or commercial disinfectant on high touch surfaces. Use a household or commercial disinfectant on high touch surfaces. Use a household or commercial disinfectant on high touch surfaces.

Mask your symptoms

Seek prompt medical attention if your illness is worsening (e.g., difficulty breathing). Before visiting care, and your healthcare provider or doctor that you have, or may be having, COVID-19. This step will help the healthcare provider offer to keep other people safe and offer you an ongoing source from getting infected and exposed.

Ask your healthcare provider to call the local or state health department. Patients who are should indicate activity restricting or difficulty breathing. Before visiting care, and your healthcare provider or doctor that you have, or may be having, COVID-19. This step will help the healthcare provider offer to keep other people safe and offer you an ongoing source from getting infected and exposed.

Seek prompt medical attention if your illness is worsening (e.g., difficulty breathing). Before visiting care, and your healthcare provider or doctor that you have, or may be having, COVID-19. COVID-19 What you need to know about coronavirus disease 2019 (COVID-19)

What is coronavirus disease 2019 (COVID-19)?

Coronavirus disease 2019 (COVID-19) is a respiratory illness that can spread from person to person. The virus that causes COVID-19 is a novel coronavirus that was first identified during an investigation into an outbreak in Wuhan, China.

What are severe complications from this virus?

Some patients have pneumonia in both lungs, multi-organ failure and in some case death.

How can I help protect myself?

People can help prevent themselves from respiratory illness with every day preventive actions.

- Avoid close contact with people who are sick.
- Avoid touching your eyes, nose, and mouth with unashed hands.
- Wash your hands often with soap and water for at least 20 seconds. Use an alcohol-based hand sanitizer that contains at least 60% alcohol if soap and water are not available.

If you are sick, to keep from spreading respiratory illness to others, you should:

- Stay home when you are sick.
- Cover your cough or sneeze with a tissue, then throw the tissue in the trash.
- Clean and disinfect frequently touched objects and surfaces.

What should I do if I recently traveled from an area with ongoing spread of COVID-19?

If you have traveled from an affected area, there may be restrictions on your movements for up to 2 weeks. If you develop symptoms during that period (fever, cough, trouble breathing), seek medical advice. Call the office of your health care provider before you go, and tell them about your travel and your symptoms. They will give you instructions on how to get care without exposing other people to your illness. While sick, avoid contact with people, don't go out and delay any travel to reduce the possibility of spreading illness to others.

Is there a vaccine?

There is currently no vaccine to protect against COVID-19. The best way to prevent infection is to take every day preventive actions, the avoiding close contact with people who are sick and washing your hands often.

Is there a treatment?

There is no specific medical treatment for COVID-19. People with COVID-19 can seek medical care to help relieve symptoms.

Can people in the U.S. get COVID-19?

The COVID-19 is spreading from person to person in parts of the United States. Risk of infection with COVID-19 is higher for people who are close contacts of someone known to have COVID-19, for example health care workers, or household members. Other people at higher risk for infection are those who live in or have recently been in an area with ongoing spread of COVID-19. Learn more about places with ongoing spread at <https://www.cdc.gov/coronavirus/2019-nCoV/locations.html>.

Have there been cases of COVID-19 in the U.S.?

Yes. The first case of COVID-19 in the United States was reported on January 21, 2020. The current status on COVID-19 in the United States is available on CDC webpage at <https://www.cdc.gov/coronavirus/2019-nCoV/cases.html>.

How does COVID-19 spread?

The virus that causes COVID-19 probably emerged from an animal source, but is now spreading from person to person. The virus is thought to spread mostly between people who are in close contact with one another (within about 6 feet) through respiratory droplets produced when an infected person coughs or sneezes. It may also spread if a person can get COVID-19 by touching a surface or object that has the virus on it and then touching their mouth, nose, or possibly their eyes, but this is not thought to be the main way the virus spreads. Learn more about how the virus spreads of newly emerged coronavirus at <https://www.cdc.gov/coronavirus/2019-nCoV/transmission.html>.

What are the symptoms of COVID-19?

Patients with COVID-19 have had mild to severe respiratory illness with symptoms of:

- fever
- cough
- shortness of breath
