

# Access Project Information in Seconds with Mobile Dashboards

Every document right at your fingertips

PART OF ARC'S  
**DESIGN AND  
CONSTRUCTION  
PRODUCTIVITY SUITE**

ARC's Productivity Suite is designed to meet your needs from site-mapping to closeout. Everything you need and anywhere you need it, available through a single-source provider.

#### Scalable

Use these tools and services - standalone or combined - on one job or many - to multiply the impact on your projects.

#### Comprehensive

This single-source of resources seamlessly enhances your project workflows and fills the gaps.

#### Smarter

Improve performance at every stage of the project lifecycle with increased intelligence - driving smarter decisions.

**Search less and build more.** Most construction projects come with thousands of pages of documents, which means getting your hands on the exact information you need often includes searching through large volumes of hard copies or multiple digital files to find what you are looking for. A mobile linked dashboard gives your team access to current plans, specs, RFIs and Submittals with a single tap.

Countless hours are lost to rework when your team and your contractors aren't working from the current set.

**With ARC Hyperlinking services,** navigating thousands of pages becomes the work of a few minutes, instead of hours, empowering everyone on your project team to be more efficient and productive.

## A tool that gets smarter by the click

It is **extremely time consuming** to organize, index, hyperlink and maintain all the various documents associated with complex construction projects.

With **ARC**, all your files are expertly organized, indexed and linked – providing you with instant one-click access to the information you need from any device. With powerful search capabilities, you can find what you need quickly and with a discrepancy log, identify design and constructability flaws early to eliminate costly errors and rework.

### **Mitigate risk**

Free up time to pre-plan and detect issues early. Reduce risk and increase compliance, while meeting project budgets and deadlines.

### **Minimize RFIs**

Our discrepancy logs will identify design and construction issues in the plan set, driving down the need for RFIs and rework later in the project.

### **Increased productivity**

Easy-to-use mobile project dashboards save countless hours of review time – increasing efficiency and productivity for the entire team.

# Save time and reduce risk with linking

**Research shows** that for every \$1 million in value, the average project will have 15-20 RFI's per day. The administrative and technical tasks required to review, research and respond to just one RFI takes a combined eight hours of labor and bears an alarming price tag of \$1,080.

**ARC's customers** shave weeks off of their construction projects and reduce overtime and rework by hyperlinking their project documents. We link critical information such as plans, specifications, RFIs, ASIs, As-Builts, bulletins, and critical closeout project documentation. A Mobile Project Dashboard helps you access the project information in seconds—anywhere, anytime.

## Pinch, tap and swipe

Easy to access dashboard of project information. No more navigating a digital or paper set to find what you need.

## Custom Mobile Project Dashboard

Linked documents follow your company's guidelines and give your team access to the info they need quickly and easily.

## Discrepancy Logs Mitigate Risk

Find errors and omissions in design and construction documents—improving communication between project partners. Reduce RFIs and PCOs.

## Smarter Projects

Navigating 1000's of pages becomes the work of a few seconds, instead of hours, empowering everyone on your team to be more efficient.

## Industry Expertise

ARC's construction experts produce smarter documents that are easy to navigate meaning your team stays focused on doing what they do best.

## Auto-Hyperlinking

Leading-edge OCR (Optical Character Recognition) identifies sheet names, callouts and information that refers to other pages while missing or omitted information is flagged.

## Cloud and Mobile Access

Your linked sets are sync'd to keep the office and field on the same page.

## Offline Access

All information sync'd to mobile devices is available for viewing and navigation without internet access.

## Project Closeout Dashboard

When the job is done, download a project closeout deliverable with up-to-date information to hand over to stakeholders.

# All the resources you need in one place

ARC's Design and Construction Productivity Suite is built to meet your needs from site-mapping to closeout. Everything you need and anywhere you need it, available through a single-source provider.

The power of the Productivity Suite is realized when a combination of complementary tools and services help you aggregate project intelligence to track project progress, monitor job-site conditions and proactively detect design and constructability issues.

Exponential layers of value in the form of increased productivity, shareable project intelligence and reduced costs are realized as additional solutions are put into use.
