

The Leading Mobile Project Closeout Delivery Tool

Achieve rapid 1-week closeouts

PART OF ARC'S
**DESIGN AND
CONSTRUCTION
PRODUCTIVITY SUITE**

ARC's **Productivity Suite** is designed to meet your needs from site-mapping to closeout. Everything you need and anywhere you need it, available through a single-source provider.

Scalable

Use these tools and services - standalone or combined - on one job or many - to multiply the impact on your projects.

Comprehensive

This single-source of resources seamlessly enhances your project workflows and fills the gaps.

Smarter

Improve performance at every stage of the project lifecycle with increased intelligence - driving smarter decisions.

90% of project closeout documents are still in paper form. While shifting to a digital document management system helps, the reality is that even your digital documents can end up unmanageable and occupy your project staff for weeks or months.

For firms who want to hand off a closeout package that's as good as the project itself, ARC has a solution-a Mobile Project Closeout Dashboard.

We collect all of your digital and physical files and then scan, tag, link and organize them to provide touch-based access to key project documents.

If you link documents during the project, your closeout deliverable maintains your hyperlinks, indexing, and folder structure enabling a 1-week closeout so you can get paid faster and move your team to the next project.

A better way to finish the job

The closeout process can be overwhelming if not properly managed through each phase of the project. The volume of documents to be collected, organized and delivered to the owner can result in delays which cost you time and money.

With ARC's industry leading software and mobile closeout dashboards, there is no more lost or misplaced documents or tracking down subcontractors and the administrative time associated with managing the closeout process is reduced greatly.

Rapid closeouts in as little as 1-week

With documents continually being updated and managed throughout the project lifecycle, there is less to do as the project hits the final stages.

Deliver up-to-date as-builts

Maintain document metadata and navigational links from project inception through closeout and deliver up-to-date and accurate as-builts.

Transform project data into business value

Whether for maintenance, future improvements or legal support, building owners appreciate the power and ease of being able to search and refer to project information in digital form.

Close out your project with an easy-to-use mobile dashboard

Depending on how well you manage the construction closeout process, it can solidify your reputation with a client or lead to cracks in the foundation of your relationship.

For the firms that want to hand off a closeout package that's as good as the project itself, ARC has a solution.

Transform this...

...to this!

Pinch, tap and swipe

Easy to access dashboard of closeout information at your fingertips. No more navigating CD's, DVD's or a paper set to find what you need.

Cloud and Mobile Access

Your linked documents are sync'd and available anytime, anywhere—ensuring your team is always on the same page.

Industry Expertise

ARC's construction experts handle the document assembly and organization meaning your team stays focused on delivering a rapid handover and moving to the next project.

Custom Mobile Closeout Dashboard

Linked documents follow your company's closeout guidelines and give your client access to the info they need quickly and easily.

Project Closeout Deliverable Includes:

- 1-year SKYSITE subscription
- Mobile Project Dashboard
- Plans
- Specifications
- Submittals
- As-builts
- O&M's
- Permits
- Warranties

All the resources you need in one place

ARC's Design and Construction Productivity Suite is built to meet your needs from site-mapping to closeout. Everything you need and anywhere you need it, available through a single-source provider.

The power of the Productivity Suite is realized when a combination of complementary tools and services help you aggregate project intelligence to track project progress, monitor job-site conditions and proactively detect design and constructability issues.

Exponential layers of value in the form of increased productivity, shareable project intelligence and reduced costs are realized as additional solutions are put into use.
